

RW: one automatic slack adjuster type of CNF.

The RW automatic brake adjuster is special desings for clearance circumstances . Machined corner ABAs have just that , a slightly machined off corner . This was done on certain applications where additional clearance was necessary . These machined corner numbers may substitute another slack of the same attributes without a machined corner.

The ABA-3 have three types.

TYPE 1
(Handed)

TYPE 2
(Handed)

TYPE 3
(Unhanded)

CHOOSING THE CORRECT ABA-3 AUTOMATIC SLACK ADJUSTER

FIRST: Make sure there is room for the ABA-3 to operate!

The Unhanded design slack is simply one in which the pawl assembly has been moved to the "edge" of the slack . The Unhanded design purpose is to eliminate having to stock pairs of slacks. In some cases, this pawl location won't be the best choice for clearance with other components in the axle area or for service accessibility to the ASA. When this occurs, use a Handed design.

The Handed design locates the pawl on the main body of the ASA. These ASA's are available as Type One and Type Two pawl mountings to fit each side of the axle and aid in accessibility in service and clearance with other axle components.
